

A Commitment To Delivering Meaningful Results.

Launched in 2020, Norplex Advanced Composites is focused on helping our customers create value through advanced composite materials and superior service.

Think of us as a start-up, but one with more than 50 years of composites expertise. We'll deliver the speed and agility of a new venture while drawing upon a long and rich history of composites leadership. Our sister organization, Norplex-Micarta is the market leader in high performance thermoset composite materials based on impregnation and lamination technology.

Through our investment in added capacity, the latest manufacturing technology, and our growing team, we're committing to support OEMs, Tier 1s, and fabricators of advanced composites in markets such as Transportation, Sporting Goods & Recreation, Renewable Energy, Medical, Industrial, and Aerospace.

Our custom-built facility outside of Bozeman, Montana has 32,000 square feet of manufacturing space to house a high speed, direct impregnation hot-melt coating line.

Norplex Advanced Composites' Capabilities

- 3 manufacturing centers: Manhattan, Montana; Postville, Iowa; and Changzhou, Jiangsu, China
- Direct impregnation hot-melt coating line & solvent-based coating capabilities
- Ability to offer a range of chemistries – epoxy, phenolic, melamine, vinylester, and specialty resins
- Ability to run various reinforcement types including unidirectional rovings and fabrics (glass, carbon, basalt, etc.)
- Cut & ply up at various orientations
- Material development and applications engineering services
- Material characterization and testing

Our Approach To Practical Innovation

We're big fans of practical innovation - the kind of innovation that helps solve your specific problem or that makes for a better process. This means we want to help you advance along any (or all) stages of the product development process: the design phase, material development and selection, and process innovation.

Our team approaches each development opportunity with three principles in mind:

- **Collaboration** with your team that is open and built upon clearly understood objectives
- **Commitment** to solving your unique challenges in a way that leads to meaningful results toward the objectives
- **Creativity** and an openness to explore new ideas and new ways of doing things

Whether it is an existing prepreg product, new material development, or a multi-material solution like EnableX™, collaboration with our partners is at the center of everything we do. If you are looking for partners who will deliver results that are meaningful to you – that's Norplex Advanced Composites.
